Documentation

This project is for user registration, log in, authentication, authorization and log out.

The server runs on localhost:5000 and to start it just typee in the command npm start server.

To register user you must post the link of API :
"http://localhost:5000/api/users/register" with post
The response will be the user's mail and name, also token with ti
id of the user which is the primary id
if the mail already in use error will be send as errorMessage.
If mobile number used before the user will be saved but without number and will send in errorMessage

To login u have to be logged out first using get to the API :
"http://localhost:5000/logout"

will send invalid token and will expires very fast.

then u can log in with post to API :
 "http://localhost:5000/api/users/login"
The response will be user's mail, name, and token to verify the logged in user.

And for authorization the API :
"http://localhost:5000/dashboard"
is a private route which can be accessed only by admins user
like admin user and test1 user.
The response is the dashboard page and if u are not authorized the u will be force redirect to home page
